PROFESSIONAL SUMMARY

Data science and analytics professional with hands-on experience in Python, SQL, and machine learning, building and evaluating predictive models and translating raw transactional data into decision-ready insight. Applies structured experiment design — clustering, hypothesis testing, and regression — to test hypotheses and validate models, documenting assumptions and data-quality caveats for reproducibility. Experience developing serverless applications on AWS (Lambda, Lex, Translate) and collaborating with cross-functional and non-technical stakeholders, communicating findings through Power BI dashboards, reports, and presentations. B.Tech in Computer Science, 2026.

CORE SKILLS

Programming & Data Science: Python (Pandas, NumPy, Matplotlib, Scikit-learn), SQL (MySQL, PostgreSQL)

Machine Learning & Analytics: Predictive modeling, K-Means & DBSCAN clustering, regression, hypothesis testing, experiment design, KPI definition & tracking, exploratory data analysis, model evaluation & documentation

Cloud: AWS (Lambda, Lex, Translate) — serverless application development, event-driven automation, cloud deployment

BI & Reporting: Power BI (data modeling, Power Query, DAX, scheduled refresh, dashboard maintenance), Tableau, Advanced Excel (PivotTables, Power Query, lookups, conditional formatting)

Data Engineering: Dataset structuring, star-schema modeling, joins across source systems, ETL logic, data cleansing, de-duplication, validation checks

Ways of Working: Jupyter Notebook, Google Colab, Git, GitHub, MS Office; SLA-driven delivery, process documentation, stakeholder communication

EXPERIENCE

Data Science Intern — Ai Variant

Sep 2025 – Jul 2026

- Cleaned, transformed, and validated large datasets using Python and SQL, resolving missing values, non-standard field entries, and duplicate records prior to analysis.
- Structured raw source data into reusable, analysis-ready datasets supporting repeatable reporting instead of one-off manual pulls.
- Performed exploratory and trend analysis on customer and transaction data, translating findings into clear takeaways for non-technical reviewers through reports and presentations.
- Built and evaluated machine learning models to solve business problems, designing experiments to test hypotheses and validate outputs, and documented assumptions and data-quality caveats so results could be reproduced; delivered assigned analysis to agreed timelines.

AWS Cloud Intern — SkillDunia (OdCet Technologies)

Feb 2025 – Apr 2025

- Developed serverless applications using AWS Lambda, Amazon Lex, and Amazon Translate, gaining practical exposure to cloud deployment.
- Automated repetitive processing steps through event-driven services, reducing manual intervention.

PROJECTS

Sales Performance Dashboard | *Power BI, SQL, Excel, Python*

- Modeled sales data into a structured dataset (fact and dimension tables) to power a single refreshable Power BI dashboard rather than separate static reports.
- Built KPI views for revenue trend, product and region performance, and customer buying behaviour, with slicers enabling self-service drill-down for stakeholders.
- Cleaned and de-duplicated source records in Python/SQL prior to load, improving reporting accuracy and consistency across views.

Customer Segmentation | *Python, Scikit-learn, SQL*

- Applied K-Means and DBSCAN clustering algorithms to segment customers by purchase behaviour, value, and frequency.
- Designed and profiled experiments across segments to identify high-potential and under-penetrated (whitespace) groups, translating clusters into targeting recommendations communicated to stakeholders.

CERTIFICATIONS

IBM Data Scientist Professional Certificate

Deloitte Data Analytics Virtual Experience Program — Forage

EDUCATION

B.Tech, Computer Science and Technology — Department of Technology, Shivaji University, Kolhapur

CGPA: 7.3 | Graduated 2026
