PROFESSIONAL SUMMARY

B.Tech Computer Science graduate (2026) with hands-on Data Analyst experience through internships and academic projects involving Python, SQL, Power BI, and Advanced Excel. Strong problem-solving skills applied to data cleaning, exploratory data analysis, and statistical modeling (classification, clustering, regression) to turn raw data into decision-ready insight. Exposure to AWS cloud services through applied project work.

TECHNICAL SKILLS

Data Analytics & BI: Power BI (Data Modeling, Power Query, DAX, Dashboards), Tableau, Advanced Excel (PivotTables, Power Query, Lookups)

Programming & Statistical Analysis: Python (Pandas, NumPy, Matplotlib, Scikit-learn), SQL (MySQL, PostgreSQL), Statistical Analysis, Hypothesis Testing, Regression, EDA

Machine Learning: Classification (Random Forest, XGBoost, Logistic Regression), Clustering (K-Means, DBSCAN), Model Evaluation (Precision, Recall, F1-score)

Data Modeling & Engineering: Star-Schema Modeling, ETL Logic, Data Cleansing, De-duplication, Validation

Cloud: AWS (Lambda, Lex, Translate)

Tools: Jupyter, Google Colab, Git/GitHub, MS Office

EXPERIENCE

Data Science Intern | *Ai Variant*

Sep 2025 – Jul 2026

- Cleaned, transformed, and validated large datasets using Python and SQL, resolving missing values, inconsistent entries, and duplicate records prior to analysis.
- Performed exploratory data analysis and statistical trend analysis on customer and transaction data, translating findings into clear insights for non-technical stakeholders.
- Built and evaluated machine learning models, documenting assumptions and data-quality caveats to ensure reproducible results.

AWS Cloud Intern | *SkillDunya (OdCet Technologies)*

Feb 2025 – Apr 2025

- Developed serverless applications using AWS Lambda, Amazon Lex, and Amazon Translate, gaining hands-on exposure to cloud-based deployment.
- Automated repetitive data-processing steps through event-driven cloud services, reducing manual intervention.

PROJECTS

Sales Performance Dashboard | *Power BI, SQL, Excel, Python*

- Modeled sales data into a structured fact/dimension schema to power a single refreshable Power BI dashboard with KPI views for revenue, product, and region performance.
- Cleaned and de-duplicated source records in Python/SQL prior to load, improving reporting accuracy and consistency.

Customer Segmentation | *Python, Scikit-learn, SQL*

- Applied K-Means and DBSCAN clustering to segment customers by purchase behaviour, value, and frequency.
- Profiled each segment to identify high-potential and under-penetrated groups, translating clusters into data-driven targeting recommendations.

Real-Time Payment Fraud Detection | *Python, Scikit-learn, SQL*

- Built a supervised classification model (Random Forest / XGBoost) using statistical modeling techniques to flag potentially fraudulent transactions from historical data.
- Addressed class imbalance and evaluated model performance using precision, recall, and F1-score for rare-event detection.

EDUCATION

B.Tech, Computer Science and Technology — Shivaji University, Kolhapur | CGPA: 7.3 | Graduated 2026

CERTIFICATIONS

IBM Data Scientist Professional Certificate | Deloitte Data Analytics Virtual Experience Program — Forage
